

Company Profile

Established in 2001, Indra Networks is a pioneer in hardware compression and encryption technologies. Our headquarters are based in San Jose, CA and our R&D offices are in Pune, India. We are a dedicated team of 15 people and each member of our senior management team brings more than 15 years of successful experience with industry leaders in innovation like IBM, HP, Sun, Oracle and a variety of startups.

We are funded by the Intel Venture Capital Group.

Our Technology

Our product line of highly efficient and energy saving boards are designed for offloading computing cycles during Compression and Encryption of Data being backed up. Ideally used for Backup appliances, SSL or HTML Accelerators, and tape encryption appliances, these boards have been tested and deployed across many popular Backup Software and Operating Systems.

Product Line

Our products are categorized into 2 specific categories - the SS series and the SC series. The cards can compress or compress+encrypt data in real time. The SC series are optimized for compressing data in storage applications, such as disk to disk backup. The SS series are optimized for compression as well as encryption of real time data.

WE300 is optimized for compressing Web content such as HTML, JavaScript and XML. Both are based on common hardware platforms, but are configured differently to achieve their individual personalities.
